UNI CIRCUIT BREAKER CABIN

August 2023

CIRCUIT BREAKER CABINET

USAGE

Cabinet for smart grid monitoring and to bring pole mounted circuit breakers down to ground level to ease operation. Designed for 50-100kVA pole mounted transformers. Current transformers can be installed inside to cabinet to monitor the pole mounted transformer.

CABINETS

Cabinets are made for outdoor use and consists of seawater-resistant aluminum and weather resistant plastic roof and bottom. The cabinets are anodized brown, both for aesthetic reason and to improve corrosion resistance.

The color is UV resistant and blends in with the environment.

Cabinets are made to provide a good climate for electronic components. To prevent condensation, cabinets are equipped with ventilation and heater, as well as insulated roof and drainage in the bottom.

A vandal-proof antenna in the roof provides radio and GSM transmission.

EQUIPMENT

The cabinet is equipped with power analyzer, surge protection and internal circuit breaker socket.

Prepared space for 2x100-200A, neutral point surge arrester, communication unit and smart meter.

USE IN CORROSIVE ENVIROMENT

Special considerations must be taken when used in corrosive environment. Grease can prevent moisture between materials in connection points. See www.el-tjeneste.no for more information.
